## 2-G-Cookies Problem

Started on	Wednesday, 20 August 2025, 8:13 AM
State	Finished
Completed on	Wednesday, 20 August 2025, 8:36 AM
Time taken	23 mins 46 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

**Question 1** | Correct   Mark 1.00 out of 1.00   [Flag question](#)

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child  $i$  has a greed factor  $g[i]$ , which is the minimum size of a cookie that the child will be content with; and each cookie  $j$  has a size  $s[j]$ . If  $s[j] \geq g[i]$ , we can assign the cookie  $j$  to the child  $i$ , and the child  $i$  will be content. Your goal is to maximize the number of your content children and output the maximum number.

**Example 1:**

**Input:**

```
3
1 2 3
2
1 1
```

**Output:**

```
1
```

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

**Constraints:**

$1 \leq \text{g.length} \leq 3 \cdot 10^4$

$0 \leq \text{s.length} \leq 3 \cdot 10^4$

$1 \leq \text{g}[i], \text{s}[j] \leq 2^{31} - 1$

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int main(){
3     int n;
4     scanf("%d", &n);
5     int a[n];
6     for(int i=0;i<n;i++){
7         scanf("%d", &a[i]);
8     }
9     int m;
10    scanf("%d", &m);
11    int b[m];
12    for(int i=0;i<n;i++){
13        scanf("%d", &a[i]);
14    }
15    int count = 0;
16    for(int i=0;i<n;i++){
17        for(int j=0;j<m;j++){
18            if(a[i] >= b[j]){
19                count++;
20                break;
21            }
22        }
23    }
24    printf("%d", count);
25    return 0;
26 }
27
28
29
30 }
```

	Input	Expected	Got	
✓	2	2	2	✓
	1 2			

3				
1	2	3		

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
